

Manual Testing Quiz - Questions, Answers & Explanations

Q1. What is manual testing?

Answer: b) Testing performed manually by testers

Explanation: Manual testing involves human testers executing test cases without automation tools.

Q2. What is the purpose of a test plan?

Answer: b) To outline the testing approach and activities

Explanation: A test plan defines scope, strategy, resources, schedule, and objectives.

Q3. What is the main goal of regression testing?

Answer: b) Ensure new code changes do not impact existing functionality

Explanation: Regression testing verifies previously working features still work.

Q4. What is the purpose of a test case?

Answer: c) Provide a detailed step-by-step procedure to execute a test

Explanation: Test cases contain steps, expected results, and test data.

Q5. Which testing level is typically performed first?

Answer: c) Unit testing

Explanation: Developers usually perform unit testing before integration and system testing.

Q6. What is the role of a test execution tool?

Answer: b) Execute test cases and compare results

Explanation: Execution tools help run tests and track outcomes.

Q7. What is the purpose of a test scenario?

Answer: c) Provide a high-level description of a test

Explanation: Scenarios describe what should be tested without detailed steps.

Q8. What is exploratory testing?

Answer: b) Ad-hoc testing without predefined test cases

Explanation: Testers learn, design, and execute tests simultaneously.

Q9. What is the purpose of the traceability matrix?

Answer: c) Trace requirements to test cases

Explanation: It ensures complete test coverage of requirements.

Q10. Which testing type focuses on critical defects?

Answer: d) Critical testing

Explanation: It targets defects that can severely affect business functionality.

Q11. Primary purpose of a test environment?

Answer: c) Provide a controlled testing environment

Explanation: It replicates production-like conditions for testing.

Q12. Difference between black-box and white-box testing?

Answer: b) Black-box focuses on external behavior; white-box on internal logic

Explanation: Black-box ignores code while white-box examines code structure.

Q13. Purpose of the bug life cycle?

Answer: b) Document and track defects

Explanation: It tracks defect status from discovery to closure.

Q14. When should testing start?

Answer: b) During requirements gathering

Explanation: Early testing helps prevent defects and misunderstandings.

Q15. Goal of acceptance testing?

Answer: b) Ensure the system meets business requirements

Explanation: Users or customers validate readiness for release.

Q16. Purpose of test data?

Answer: c) Provide input values for test cases

Explanation: Valid and invalid data help verify behavior.

Q17. Primary goal of load testing?

Answer: b) Ensure the system can handle expected load

Explanation: It evaluates performance under anticipated user traffic.

Q18. Testing to ensure recovery from failures?

Answer: a) Recovery testing

Explanation: It verifies system restoration after crashes or failures.

Q19. Purpose of exit criteria?

Answer: c) Determine when testing is complete

Explanation: Defines conditions required before ending testing.

Q20. Difference between system and acceptance testing?

Answer: c) System testing is performed before acceptance testing

Explanation: Acceptance testing follows successful system testing.

Q21. Purpose of severity level?

Answer: b) Determine defect impact

Explanation: Severity reflects business or functional impact.

Q22. Difference between functional and non-functional testing?

Answer: a) Functional tests features; non-functional tests performance and quality attributes

Explanation: Non-functional testing includes performance, security, usability, etc.

Q23. Purpose of a test log?

Answer: c) Provide a record of test execution activities

Explanation: It tracks executed tests and outcomes.

Q24. When should test case design start?

Answer: b) During requirements gathering

Explanation: Early design improves coverage and understanding.

Q25. Primary goal of usability testing?

Answer: d) Evaluate user-friendliness

Explanation: Measures ease of use and user satisfaction.

Q26. Purpose of a test harness?

Answer: c) Provide a controlled testing environment

Explanation: A test harness includes drivers, stubs, and supporting tools.

Q27. Role of a test manager?

Answer: c) Plan, coordinate, and manage testing activities

Explanation: Responsible for test strategy, resources, and reporting.

Q28. Purpose of the test summary report?

Answer: c) Provide a summary of testing activities and results

Explanation: Communicates testing outcomes and quality status.

Q29. Purpose of boundary value analysis?

Answer: c) Test values at boundaries of valid ranges

Explanation: Defects often occur at boundary conditions.

Q30. Difference between verification and validation?

Answer: a) Verification checks requirements; validation checks intended use

Explanation: Verification asks 'Are we building it right?' Validation asks 'Are we building the right product?'

Q31. Purpose of requirements traceability matrix?

Answer: c) Trace test cases to requirements

Explanation: Ensures every requirement is tested.

Q32. Primary goal of performance testing?

Answer: b) Ensure the system can handle expected load

Explanation: Measures speed, stability, and scalability.

Q33. Purpose of test configuration management?

Answer: c) Manage test configurations and changes

Explanation: Controls versions and environments used in testing.

Q34. Difference between positive and negative testing?

Answer: d) Positive testing validates expected behavior; negative testing finds failures

Explanation: Both are needed for comprehensive coverage.

Q35. Purpose of test execution phase?

Answer: a) Execute test cases

Explanation: Actual execution validates application behavior.

Q36. Focus of smoke testing?

Answer: c) Ensure basic functionality works before detailed testing

Explanation: Acts as a build verification test.

Q37. Purpose of test incident report?

Answer: b) Document defects

Explanation: Captures issues found during testing.

Q38. Purpose of compatibility testing?

Answer: c) Ensure software works across environments and configurations

Explanation: Verifies support for browsers, OSs, devices, etc.

Q39. Primary goal of security testing?

Answer: c) Ensure software is free from vulnerabilities

Explanation: Identifies weaknesses that could be exploited.

Q40. Purpose of test closure phase?

Answer: c) Finalize testing activities and provide a summary report

Explanation: Includes lessons learned and closure metrics.
